

## MOVPE UPDATE

The Fourth International MOVPE Conference May 1988,  
Hakone, Japan

The conference started with an almost traditional invited paper by one of the most prominent workers in MOVPE, Dr. Manijeh Razeghi, of Thomson CSF. In a keynote address, Dr. Razeghi outlined the sheer diversity and potential of MOVPE, with a catalogue of firsts of new materials, highest mobilities, sharpest interfaces and new devices. One delegate described Dr. Razeghi as "a madonna of MOVPE in her grotto south of Paris producing material miracles" while another referred to this type of work as the essential driving force in the development of MOVPE as an explorative and diversifying technique. So on with the diversity!
